

# Simple Video Production Process

Step 1: Decide on what your project will be.

HINT: when choosing a "story", many times, less is more. Especially if you're going to use it for movie talk.

Step 2: Pick your device.

HINT: Consider storage, screen size, age of device. Newer ones will typically be faster.

Step 3: Make your shot list. **Do not skip this step.** Do not try to wing it. Plan for different angles + types of shots for each part of the video.

Step 4: Shoot!

Step 5: Edit

HINT: Expensive editing programs do not really offer many more features that the average person would need. MovieMaker (Windows) or iMovie (MAC) offer plenty of features. There are many apps available

Step 6: Show off your work!
